

Cat-interiors: Cat Beds as Design Objects

At the top of the list of outstanding modern cat product designers are the people at [cat-interiors](#). This German company creates exquisite furnishings for cats, emphasizing both design and functionality. They believe that cat furnishings, such as cat beds and scratching posts, do not need to reveal their purpose at first glance. Instead, unusual design can transform these objects into "furniture showpieces."

In addition to creating beautifully designed objects, cat-interiors also seeks to create pieces that have been thoroughly thought-out while keeping the users (i.e. cats) in mind. One of the design criteria at cat-interiors is that cats must accept a new product, use it, and visibly show how happy they are with it.

Made with only the highest quality materials and craftsmanship, the products from cat-interiors are meant to withstand years of use. Everything is manufactured in Germany and made by hand, not in assembly line mass-production. This kind of quality and attention to detail undoubtedly results in cat furnishings that can truly be called design objects.

Cat-interiors currently offers several styles of cat beds. The various styles have an outer cover of either wicker or felt and all have a luxurious inner cushion with a custom filling developed specifically for cats. The filling is a non-allergenic flaked latex that forms a hollow when cats sit on it. All cushion covers are removable and machine washable.
